

Visiotech and DAVANTIS

A stellar alliance
to serve the
renewables sector

Video analytics is a
powerful, efficient tool
for security management
and perimeter control

In recent years, photovoltaic power has become the most commonly installed source of power - both renewable and non-renewable. The EU has committed to the green energy transition, in fact member states are making massive investments to achieve the zero emissions targets set for 2050.

Fortunately, Spain is in an unbeatable situation to take advantage of the new world economy and has positioned itself as the main driving force behind renewable generation.

That's why Visiotech and DAVANTIS are collaborating on a perimeter security product to protect renewable energy power plants with a video analytics system that ensures maximum control and protection.

The boom in renewable energy power plant installation is receiving enormous financial support across the globe, with the sector expected to register an interannual growth rate of 27% by 2021. This means protecting large perimeters with effective security systems to safeguard critical sites containing valuable technological equipment.

When it comes to security, **enormous sites now need protection while keeping costs low by using smart technologies.** These must be capable of ensuring early detection with only minimal false alarms. That's why the combination of thermal imaging and video analytics is the best solution.

About Visiotech and DAVANTIS

Visiotech, a major European video surveillance intrusion

“This agreement allows us to offer a solution an extremely competitive solution for power plants, supported by the DAVANTIS highly competitive and efficient analytics technology”

Alberto Zamorano Sáiz,
Sales and Marketing Manager
at Visiotech.

and access control wholesaler with extensive experience of thermal cameras, and DAVANTIS, a leading manufacturer of video analytics systems, whose hallmarks are seamless, simple installation, are combining their solutions and

“We know that this new alliance will mean success for both companies and we want to focus our work on satisfying the sector's needs”,

says Jordi Capdevila, Sales manager at DAVANTIS.

synergies to create a simple, efficient detection system that integrates with all alarm management software, CRA, VMS and PSIM.

This technological alliance will ensure an optimal, viable, efficient system for perimeter security on renewable energy plants.
