The Highest Peak of Video Analytics

DFUSION /3 opens the door to a new world, taking our video analytics technology well beyond perimeter security.

Our advanced Artificial Intelligence models can distinguish people, animals, vehicles, and behaviours.

We evolve into a versatile, cross-industry platform designed to meet the challenges of multiple sectors and applications.

/3

DFUSION /3

Detections

People and their behaviour

Intruders or individuals displaying suspicious behaviour

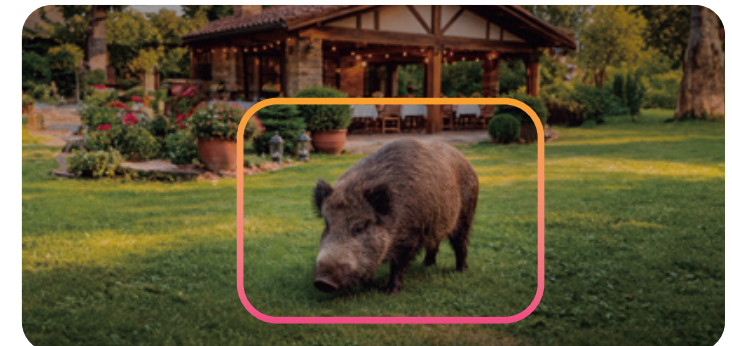

Different vehicle types

Detection of cars, motorcycles, vans, lorries, bicycles, and more

Animal detection

Presence of animals in areas where they may pose a risk

“

New
detections,
endless
possibilities

Behaviour Analysis

01. Prolonged loitering detection

Interprets loitering patterns to turn surveillance into active prevention

02. Stationary person or vehicle

Detects when a person or vehicle remains unusually stationary and warns of potential risks

03. Absence of person or vehicle

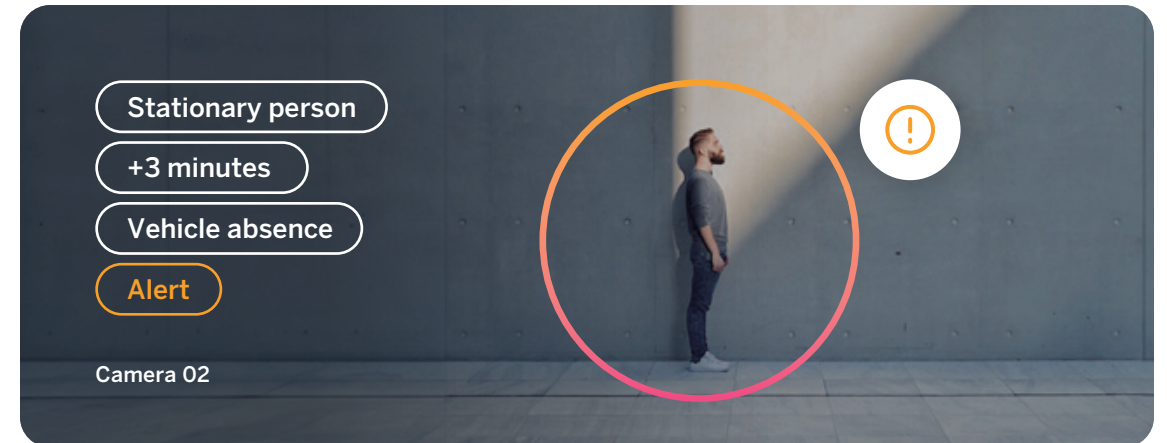

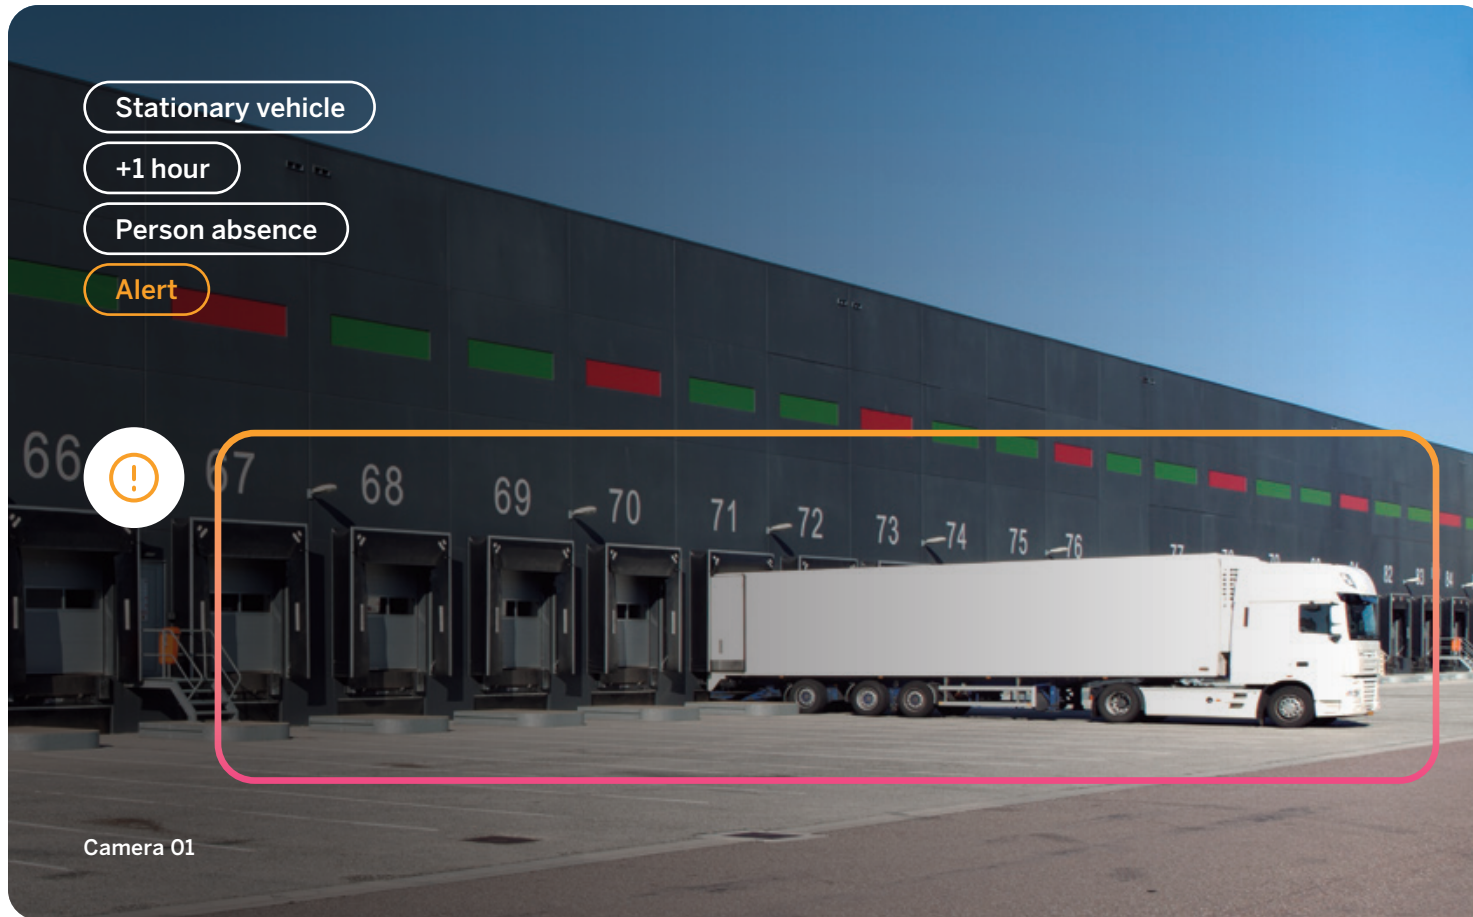

The system detects the absence of a person or vehicle in areas monitored by the security system

Analyses behaviour and detects intruder intent before a crime occurs

DFUSION /3 interprets behavioural patterns and acts before risk materialises, preventing intrusions, property damage, and threats to people.

It doesn't just record what is happening—it understands what is about to happen and enables intervention at the critical moment, when prevention is still possible.

Super rules – infinite detection combinations

Customise each camera, define complex behaviours, and combine as many conditions as needed to clearly distinguish real alarms from the rest

Camera 01

Example / In this area, an alert will be triggered with the following combination: a stationary vehicle + 1 hour + no person present

Camera 02

Example / In this area, an alert will be triggered with the following combination: a stationary person + 3 minutes + no vehicles present

Camera 03

Example / In this area, requirements are different. An alert will be triggered with the following combination: security guard absent from post + group of more than 3 people waiting

Super rules

DFUSION /3 detection models

Suspicious behaviour / loitering

Interprets movement and
behaviour patterns to detect intent
before they turn into intrusions

Detection models

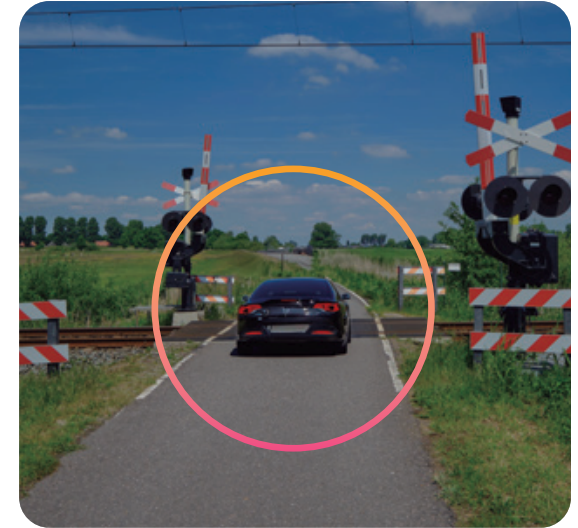

Suspicious presence

A person or vehicle remaining in a specific area longer than usual

Overcrowding alert

Detects when the number of people exceeds the permitted limit in an area

Railway crossings

Detects animals, people, or vehicles stopped at a level crossing

Absence detection

Automatically detects the absence of people in areas where human presence is required for safety

Fall and injury detection

Detects when a person falls and may be injured, triggering an immediate alert

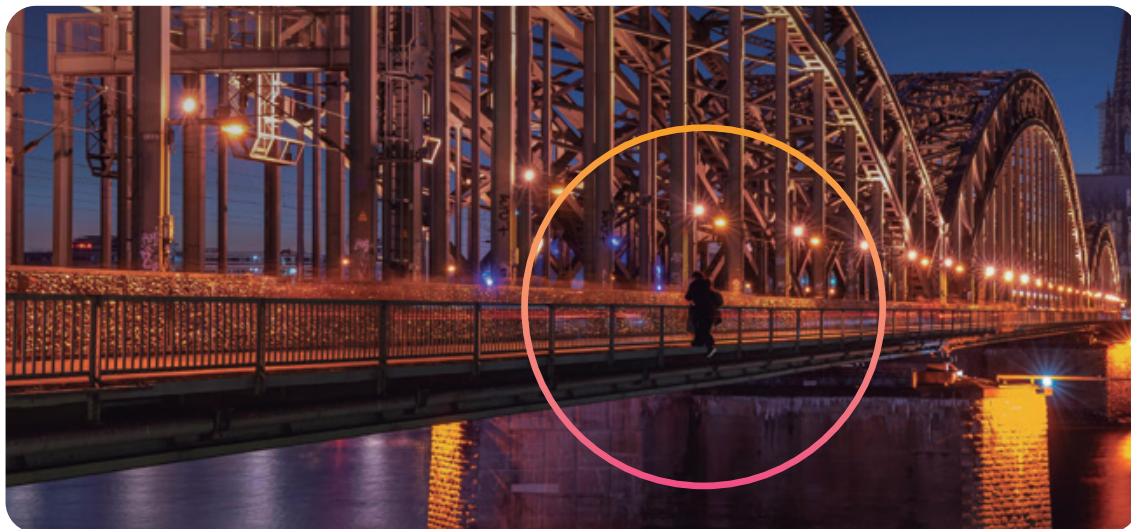

Long queues

Detects unusually long queues to improve service efficiency and prevent overcrowding

Excessive loading time

Detects vehicles that remain longer than permitted in loading and unloading areas

Bridge exterior safety

Alerts when people wander or remain on the exterior parts of a bridge

Prolonged ATM presence

Detects people who stay at an ATM longer than usual

Tailgating

Detects unauthorised access when a person or vehicle closely follows an authorised one

DFUSION /3 Range

We provide real solutions worldwide for all types of sectors and facilities

Our solutions adapt to the needs and requirements of our clients

DFUSION /3 MINI

Reliable and cost-effective system for small installations and residential areas

Connected to the CMS
70 m day/night camera

DFUSION /3

Efficient and scalable system for the industrial sector

Integrated with CMS, VMS and PSIM
70 m day/night camera
320 m thermal camera

DFUSION /3 PRO

The most powerful video analytics for critical infrastructures

Integrated with CMS, VMS and PSIM
128 m day/night camera
555 m thermal camera

Advanced features

“

The usual features, like never before

Threat Levels

Activates different predefined detection profiles based on the type of risk and threat

Critical infrastructures can use different security protocols depending on their characteristics.

Our solutions work with different sensitivities and zones depending on the current threat level.

The different levels can be activated from an external device.

ATKPRO

Automatically tracks the intruder when they leave the fixed camera's field of view

Optional module that automatically follows the intruder when they leave the field of view of the fixed camera.

The Smart PTZ positions the camera at the detection point and takes control by following the intruder as they move. A video of the alarm is sent to the control centres for additional verification.

Maps in Action

Allows operators to view facility activity and movements in real time on a live map

Optional module that allows operators to visualise the activity of a facility on a live map.

Alarmed cameras change their status to alert operators.

Hotspot mode automatically opens the camera's live image in the event of an alarm.

Flexibility and compatibility in your installation

Complete freedom to design the best CCTV setup.

The DFUSION /3 range allows you to scale video analytics systems, send technical incident alarms to control centres, and its polling system notifies you of connection losses.

Increase the efficiency of your security personnel.

Simple and fast installation, highly intuitive software, and remote technical support. We make it easy.

Compatible with any CCTV hardware brand and can be integrated with CMS, VMS and PSIM

Central Monitoring -
nothing will
ever be the
same again

Register for free at
davantis.com and
 start designing your
 projects today

Site Planning Tool, design easily and free of charge

Design your perimeter security projects while reducing costs and installation time. We support you throughout every stage of the project

Create projects using any type of camera from any manufacturer

Avoid blind spots, poor lighting and incorrect detection distances

Know the exact detection range of each camera with its corresponding lens

Import and export projects and share them with our experts for professional advice

Send your clients the project in PDF format, customised with your company logo

Define the coverage angle to ensure no detection is lost on the horizontal plane
