

Advanced DFUSION /3 video analytics course

Discover the most powerful generation of video analytics and optimise your security system

Get all our installation and configuration tricks with theory and real examples

What will you learn?

Installation recommendations and advanced configuration to take full advantage of DFUSION /3 video analytics.

Carry out the necessary connections to avoid connectivity or event transmission issues.

Technical training to configure cameras, rules, relays and multi-machine units.

Learn how to perform system commissioning to ensure the correct operation of the video analytics system.

With Super rules, customise each camera, define complex behaviours and combine all the scenarios required for your installation.

Access real detections to understand how the technology works and how to manage false alarms.

Discover the full potential of video analytics, learn to think like an expert and resolve any issues that may arise in your installation.

Any questions?

Our expert team will advise and guide you through every stage of the project, from sales visits, design, and planning, to commissioning the installation.
